About The NCS™

The National Community Survey™ (The NCS™) report is about the "livability" of Palm Springs. A livable community is a place that is not simply habitable, but that is desirable. It is not only where people do live, but where they want to live. The survey was developed by the experts from National Research Center at Polco.

Great communities are partnerships of the government, private sector, community-based organizations and residents, all geographically connected. The NCS captures residents' opinions considering ten central facets of a community:

- Economy
- Mobility
- Community Design
- Utilities
- Safety
- Natural Environment
- Parks and Recreation
- Health and Wellness
- Education, Arts, and Culture
- Inclusivity and Engagement

The report provides the opinions of a representative sample of 486 residents of the City of Palm Springs collected from September 1, 2021 to October 11, 2021. The margin of error around any reported percentage is 4% for all respondents and the response rate for the 2021 survey was 19%. Survey results were weighted so that the demographic profile of respondents was representative of the demographic profile of adults in Palm Springs.

How the results are reported

For the most part, the percentages presented in the following tabs represent the "percent positive." Most commonly, the percent positive is the combination of the top two most positive response options (i.e., excellent/good, very safe/somewhat safe, etc.). On many of the questions in the survey respondents may answer "don't know." The proportion of respondents giving this reply is shown in the full set of responses included in the tab "Complete data." However, these responses have been removed from the analyses presented in most of the tabs. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item.

Comparisons to benchmarks

NRC's database of comparative resident opinion is comprised of resident perspectives gathered in surveys from over 600 communities whose residents evaluated the same kinds of topics on The National Community Survey. The comparison evaluations are from the most recent survey completed in each community in the last five years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The communities in the database represent a wide geographic and population range. In each tab, Palm Springs' results are noted as being "higher" than the benchmark, "lower" than the benchmark, or "similar" to the benchmark, meaning that the average rating given by Palm Springs residents is statistically similar to or different (greater or lesser) than the benchmark. Being rated as "higher" or "lower" than the benchmark means that Palm Springs' average rating for a particular item was more than 10 points different than the benchmark. If a rating was "much higher" or "much lower," then Palm Springs' average rating was more than 20 points different when compared to the benchmark.

The survey was administered during the COVID-19 pandemic, a time of challenge for many local governments. While we provide comparisons to national benchmarks, it is important to note that much of the benchmark data was collected prior to the pandemic. This may impact how your City's 2021 ratings compare to other communities' ratings from the past five years.

Methods

Selecting survey recipients

All households within the City of Palm Springs were eligible to participate in the survey. A list of all households within the zip codes serving Palm Springs was purchased from Go-Dog Direct based on updated listings from the United States Postal Service. Since some of the zip codes that serve the City of Palm Springs households may also serve addresses that lie outside of the community, the exact geographic location of each housing unit was compared to community boundaries using the most current municipal boundary file. Addresses located outside of the City of Palm Springs boundaries were removed from the list of potential households to survey. Each address identified as being within city boundaries was further identified as being within one of the six areas. From that list, addresses were randomly selected as survey recipients, with multi-family housing units (defined as those with a unit number) sampled at a rate of 5:3 compared to single family housing units.

An individual within each household was selected using the birthday method. The birthday method selects a person within the household by asking the "person whose birthday has most recently passed" to complete the questionnaire. The underlying assumption in this method is that day of birth has no relationship to the way people respond to surveys. This instruction was contained in the introduction of the survey.

Conducting the survey

The 2,700 randomly selected households received mailings beginning on September 1, 2021 and the survey remained open for 6 weeks. For 1,200 households, the first mailing was a postcard inviting the household to participate in the survey. The next mailing contained a cover letter with instructions, the survey questionnaire, and a postage-paid return envelope. The final mailing contained a reminder letter, another survey, and a postage-paid return envelope. For the remaining 1,500 households, the first mailing was a postcard inviting the household to participate, followed one week later by a reminder postcard. All mailings included a web link to give residents the opportunity to respond to the survey online. All follow-up mailings asked those who had not completed the survey to do so and those who had already done so to refrain from completing the survey again.

The survey was available in Spanish. All mailings contained paragraphs in Spanish instructing participants on how to complete the survey in their preferred language.

About 7% of the 2,700 mailed invitations or surveys were returned because the household address was vacant or the postal service was unable to deliver the survey as addressed. Of the remaining 2,503 households that received the invitations to participate, 486 completed the survey, providing an overall response rate of 19%. The response rate was calculated using AAPOR's response rate #2* for mailed surveys of unnamed persons.

It is customary to describe the precision of estimates made from surveys by a "level of confidence" and accompanying "confidence interval" (or margin of error). A traditional level of confidence, and the one used here, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents' opinions are relied on to estimate all residents' opinions. The margin of error for the City of Palm Springs survey is no greater than plus or minus four percentage points around any given percent reported for all respondents (486 completed surveys).

In addition to the randomly selected "probability sample" of households, a link to an online open participation survey was publicized by the City of Palm Springs. The open participation survey was identical to the probability sample survey with two small updates; it included a map at the beginning asking where the respondent lives and a question about where they heard about the survey. The open participation survey was open to all city residents and became available on September 22, 2021. The survey remained open for 3 weeks. The data presented in the following tabs exclude the open participation survey data, but a tab at the end provides the complete frequency of responses to questions by the open participation respondents.

Analyzing the data

Responses from mailed surveys were entered into an electronic dataset using a "key and verify" method, where all responses are entered twice and compared to each other. Any discrepancies were resolved in comparison to the original survey form. Range checks as well as other forms of quality control were also performed. Responses from surveys completed on Polco were downloaded and merged with the mailed survey responses.

The demographics of the survey respondents were compared to those found in the 2010 Census and 2017 American Community Survey estimates for adults in the City of Palm Springs. The primary objective of weighting survey data is to make the survey respondents reflective of the larger population of the community. The characteristics used for weighting were age, sex, race, Hispanic origin, housing type, housing tenure, and area. No adjustments were made for design effects. Weights were calculated using an iterative, multiplicative raking model known as the ANES Weighting Algorithm.* The results of the weighting scheme for the probability sample are presented in the following table.

NRC aligns demographic labels with those used by the U.S. Census for reporting purposes, when possible. Some categories (e.g., age, race/Hispanic origin, housing type, and length of residency) are combined into smaller subgroups.

| | | Unweighted | Weighted | Target* |
|-----------------|--------------------------------------|------------|----------|---------|
| Age | 18-34 | 2% | 8% | 16% |
| | 35-54 | 16% | 31% | 29% |
| | 55+ | 83% | 60% | 55% |
| Area | District 1 | 10% | 13% | 13% |
| | District 2 | 17% | 16% | 18% |
| | District 3 | 16% | 18% | 17% |
| | District 4 | 25% | 22% | 22% |
| | District 5 | 30% | 24% | 23% |
| | PO Box | 3% | 8% | 7% |
| Hispanic origin | No, not Spanish, Hispanic, or Latino | 92% | 78% | 78% |
| | Spanish, Hispanic, or Latino | 8% | 22% | 22% |
| Housing tenure | Own | 77% | 59% | 59% |
| | Rent | 23% | 41% | 41% |
| Housing type | Attached | 57% | 53% | 53% |
| | Detached | 43% | 47% | 47% |
| Race & Hispanic | Not white alone | 18% | 32% | 33% |
| origin | White alone, not Hispanic or Latino | 82% | 68% | 67% |
| Sex | Female | 25% | 43% | 42% |
| | Male | 75% | 57% | 58% |
| Sex/age | Female 18-34 | 1% | 4% | 7% |
| | Female 35-54 | 4% | 12% | 11% |
| | Female 55+ | 20% | 26% | 24% |
| | Male 18-34 | 1% | 4% | 9% |
| | Male 35-54 | 12% | 19% | 17% |
| | Male 55+ | 62% | 34% | 31% |

The survey datasets were analyzed using all or some of a combination of the Statistical Package for the Social Sciences (SPSS), R, Python, and Tableau. For the most part, the percentages presented in the reports represent the "percent positive." The percent positive is the combination of the top two most positive response options (i.e., excellent/good, very safe/somewhat safe, essential/very important, etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating "yes" or participating in an activity at least once a month.

On many of the questions in the survey respondents may answer "don't know." The proportion of respondents giving this reply is shown in the full set of responses included in the tab "Complete data". However, these responses have been removed from the analyses presented in the reports. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item.

Highlights

Residents experience a high quality of life and are engaged with their community.

At least 8 in 10 residents gave excellent or good marks to Palm Springs as a place to live, the overall quality of life in the city, the overall image or reputation of Palm Springs, and the city as a place to retire; these ratings were similar to those given in other communities across the nation except for place to retire, which was higher. A similar proportion of residents would recommend living in Palm Springs to someone who asked (84%) and planned to remain in the city for the next five years (80%).

The residents of Palm Springs are also engaged with the community and feel that it is welcoming. At least two-thirds of residents gave positive marks to opportunities to volunteer, openness and acceptance of the community toward people of diverse backgrounds, making all residents feel welcome, and valuing/respecting residents from diverse backgrounds. This engagement extends to participation in city matters, with about one-third of residents selecting 'yes' to watching a local public meeting, which was higher than the national average, and about half of residents having contacted the City for help or information.

Safety is a priority for Palm Springs residents and an area of opportunity for the City.

When asked about aspects of the community the City should focus on in the next two years, about 9 in 10 residents responded that the importance of the overall feeling of safety in the city was essential or very important, which was a rating higher than the national benchmark. A lower proportion of residents gave the quality of the feeling of safety in Palm Springs positive ratings (58% excellent or good) which was lower than average. The discrepancy in quality and importance ratings for this facet indicates that safety is an area of priority for the residents of Palm Springs.

About 8 in 10 reported feeling very safe or somewhat safe in their neighborhood and in Palm Springs' downtown/commercial area during the day, and also from fire, flood, or other natural disasters. These were similar to the national benchmarks. Residents felt the least safe from violent crime (62% very or somewhat safe) and property crime (52%), both of which were lower than the national averages. However, a number of safety services were rated positively by residents, including fire services (88% excellent or good), ambulance/EMS services (81%), fire prevention and education (69%), and animal control (69%). Safety service ratings that were less positive were consistent with items relating to feelings of safety, as police/sheriff services (63%) and crime prevention (43%), which were both rated lower than the national comparisons.

Aspects of Palm Springs' economy shine.

Virtually all residents gave positive marks to Palm Springs as a place to visit (92% excellent or good), which was much higher than ratings given in other communities across the nation. Roughly 7 in 10 residents also had positive views toward the overall quality of business and service establishments, vibrancy of the downtown/commercial area, and the variety of business and service establishments. Items related to employment tended to receive lower scores, including Palm Springs as a place to work (52%), and employment opportunities (45%). The vibrancy of the downtown/commercial area was higher than the national benchmark while all other economy ratings were similar.

Utilities in Palm Springs received mixed results.

Along with safety, Palm Springs residents indicated that Utilities were an area of priority. When asked about areas of focus, 93% of residents indicated that the importance of utilities was essential or very important, while 58% rated their quality as excellent or good. Utility-related services in Palm Springs that were rated positively by residents included garbage collection (82%), sewer services (79%), and drinking water (60%). These were all similar to ratings received in other communities nationally. About half of residents gave positive ratings to power (electric and/or gas) utility, which was lower than the national benchmark, and stormwater management, which was similar. Less than half of respondents gave positive marks to utility billing and affordable high speed internet, which were much lower and lower compared to national averages, respectively.

Residents appreciate the ease of travel in Palm Springs.

A strong majority of the items relating to the ease of travel in Palm Springs received positive ratings, highlighted by the ease of travel by car (80% excellent or good). About two-thirds of residents also had positive views toward the ease of walking, traffic flow on major streets, ease of public parking, and the ease of travel by bicycle. Traffic flow on major streets as well as the ease of travel by bicycle received marks that were higher than the national benchmarks, while all others were similar. Public transportation was the poorest performing item in this area (32%), though it was still similar to the benchmark.

Facets of livability

Resident perceptions of quality and importance for each of the facets of community livability provide an overview of community strengths and challenges that are useful for planning, budgeting and performance evaluation. The charts below show the proportion of residents who rated the community facets positively for quality and the priority (importance) placed on each. Also displayed is whether local ratings were lower, similar, or higher than communities across the country (the national benchmark).

| Please rate each of the following characteristics as they relate to Palm Springs as a whole. (% excellent or good) | | vs. benchmark* |
|--|-----|-------------------|
| Overall economic health | 67% | Similar |
| Overall quality of the transportation system | 58% | Similar |
| Overall design or layout of residential and commercial areas | 74% | Similar |
| Overall quality of the utility infrastructure | 58% | Similar |
| Overall feeling of safety | 58% | Lower |
| Overall quality of natural environment | 80% | Similar |
| Overall quality of parks and recreation opportunities | 69% | Similar |
| Overall health and wellness opportunities | 75% | Similar |
| Overall opportunities for education, culture, and the arts | 66% | Similar |
| Residents' connection and engagement with their community | 55% | Similar |

Please rate how important, if at all, you think it is for the Palm Springs community to focus on each of the following in the coming two years.

(% essential or very important)

| Overall economic health | 92% | Similar |
|--|-----|---------|

Balancing performance and importance

Every jurisdiction must balance limited resources while meeting resident needs and striving to optimize community livability. To this end, it is helpful to know what aspects of the community are most important to residents and which they perceive as being of higher or lower quality. It is especially helpful to know when a facet of livability is considered of high importance but rated as lower quality, as this should be a top priority to address.

To help guide City staff and officials with decisions on future resource allocation, resident ratings of the importance of services were compared to their ratings of the quality of these services. To identify the services perceived by residents to have relatively lower quality at the same time as relatively higher importance, all services were ranked from highest perceived quality to lowest perceived quality and from highest perceived importance to lowest perceived importance. Some services were in the top half of both lists (higher quality and higher importance); some were in the top half of one list but the bottom half of the other (higher quality and lower importance or lower quality and higher importance); and some services were in the bottom half of both lists.

Services receiving quality ratings of excellent or good by 66.5% or more of respondents were considered of "higher quality" and those with ratings lower than 66.5% were considered to be of "lower quality." Services were classified as "more important" if they were rated as essential or very important by 81.3% or more of respondents. Services were rated as "less important" if they received a rating of less than 81.3%. This classification uses the median ratings for quality and importance to divide the services in half.

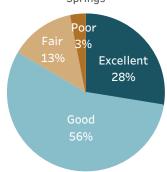

The quadrants in the figure below show which community facets were given higher or lower importance ratings (right-left) and which had higher or lower quality ratings (up-down). Facets of livability falling closer to a diagonal line from the lower left to the upper right are those where performance ratings are more commensurate with resident priorities. Facets scoring closest to the lower right hand corner of the matrix (higher in importance and lower in quality) are those that may warrant further investigation to see if changes to their delivery are necessary to improve their performance. This is the key part of this chart on which to focus. Facets falling in the top left hand corner of the chart (lower in importance but higher in quality) are areas where performance may outscore resident priorities, and may be a consideration for lower resource allocation.

Quality of life

Measuring community livability starts with assessing the quality of life of those who live there, and ensuring that the community is attractive, accessible, and welcoming to all.

The overall quality of life in Palm Springs

National benchmark tables

This table contains the comparisons of Palm Springs' results to those from other communities. The first column shows the comparison of Palm Springs' rating to the benchmark. Palm Springs' results are noted as being "higher", "lower" or "similar" to the benchmark, meaning that the average rating given by Palm Springs residents is statistically similar to or different than the benchmark. The second column is Palm Springs' "percent positive." Most commonly, the percent positive is the combination of the top two most positive response options (i.e., excellent/good). The third column is the rank assigned to Palm Springs' rating among communities where a similar question was asked. The fourth column is the number of communities that asked a similar question. The fifth column shows the percentile for Palm Springs' result -- that is what percent of surveyed communities had a lower rating than Palm Springs.

| | | | % positive | Rank | Number of communities | Percentile |

Complete set of frequencies

This dashboard contains a complete set of responses to each question on the survey. By default, "Don't know" responses are excluded, but may be added to the table using the response filter to the right. When a table for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.

Methods (open participation)

As part of its participation in The National Community Survey™ (The NCS™), the City of Palm Springs conducted a survey of 486 residents. Survey invitations were mailed to randomly selected households and data were collected from September 1, 2021 to October 11, 2021. The results from this main survey effort represent the most robust estimate of your residents' opinions.

After the above data collection period was underway, a link to an online open participation survey was publicized by the City of Palm Springs. The open participation survey was identical to the probability sample survey with two small updates; it included a map at the beginning asking where the respondent lives and also a question about where they heard about the survey. The open participation survey was open to all city residents and became available on September 22, 2021. The survey remained open for 3 weeks and there were 641 responses.

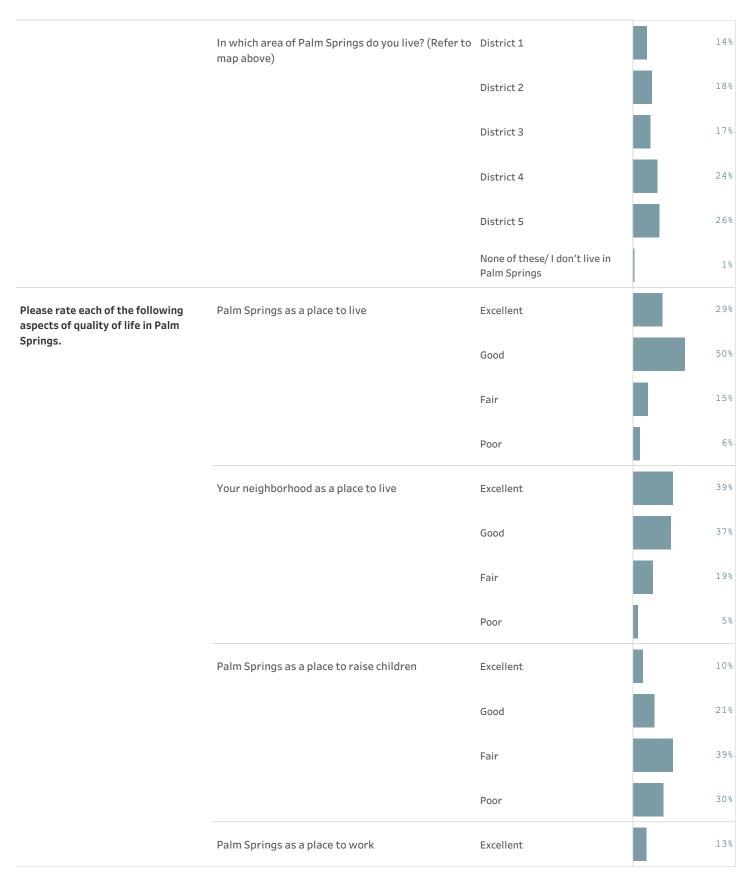

The open participation survey data were not collected through a random sample and it is unknown who in the community was aware of the survey; therefore, a level of confidence in the representativeness of the sample cannot be estimated. However, to reduce bias where possible, these data were statistically weighted to match the demographic characteristics of the 2010 Census and 2017 American Community Survey estimates for adults in the City of Palm Springs. The characteristics used for weighting were age, sex, race, Hispanic origin, housing type, housing tenure, and area. No adjustments were made for design effects. Weights were calculated using an iterative, multiplicative raking model known as the ANES Weighting Algorithm.* The results of the weighting scheme for the open participation survey are presented in the following table.

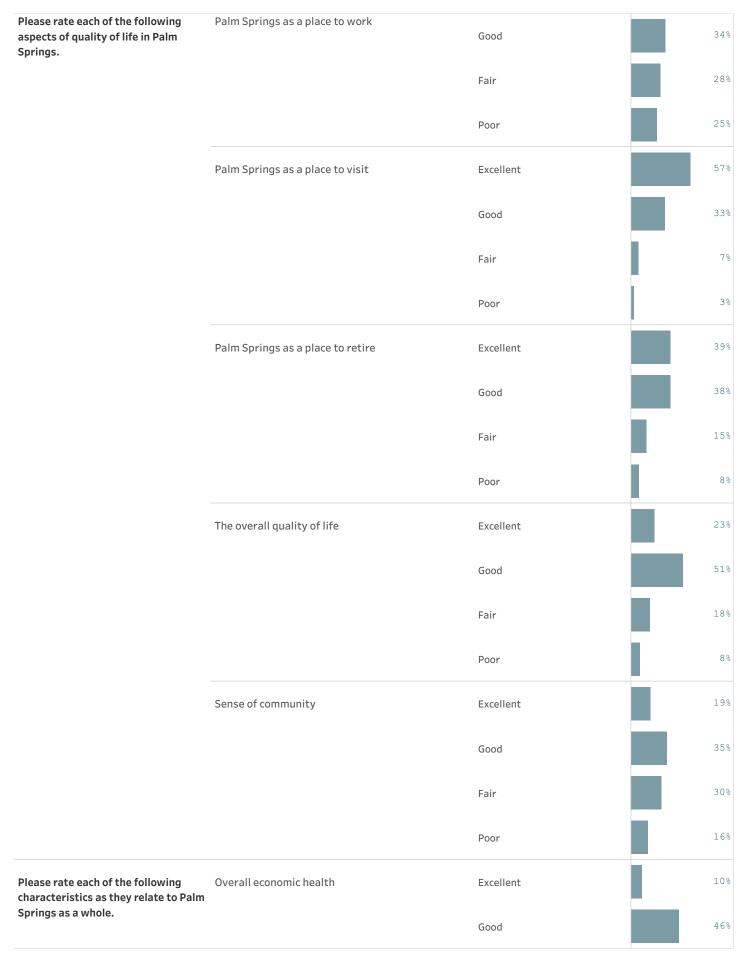

| | | Unweighted | Weighted | Target* |
|----------------|---|------------|----------|---------|
| Age | 18-34 | 2% | 11% | 16% |
| | 35-54 | 21% | 30% | 29% |
| | 55+ | 77% | 59% | 55% |
| Area | District 1 | 18% | 14% | 14% |
| | District 2 | 16% | 19% | 19% |
| | District 3 | 23% | 17% | 18% |
| | District 4 | 21% | 24% | 24% |
| | District 5 | 21% | 26% | 25% |
| Hispanic | No, not Spanish, Hispanic, or Latino | 93% | 78% | 78% |
| | Yes, I consider myself to be Spanish, Hispa | 7% | 22% | 22% |
| Housing type | Attached | 37% | 53% | 53% |
| | Detached | 63% | 47% | 47% |
| race | Not white | 11% | 15% | 15% |
| | White | 89% | 85% | 85% |
| Race/ethnicity | Not white alone | 17% | 32% | 33% |
| | White alone, not Hispanic or Latino | 83% | 68% | 67% |
| Sex | Female | 36% | 44% | 42% |
| | Male | 64% | 56% | 58% |
| Sex/age | Female 18-34 | 1% | 6% | 7% |
| | Female 35-54 | 7% | 12% | 11% |
| | Female 55+ | 28% | 25% | 24% |
| | Male 18-34 | 1% | 5% | 9% |

Open participation survey results

This dashboard contains a complete set of responses to each question on the open participation survey. By default, "don't know" responses are excluded, but may be added to the table using the response filter to the right. When a table for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.
