Palm Springs Wastewater Treatment Plant COVID-19 Testing Test Results from April 4 & 5, 2022

Palm Springs is one of many agencies voluntarily sampling its wastewater for the detection of SARS-CoV-2. To do the test, the City takes 24-hour composite samples from the wastewater treatment plant and sends them via dry ice to GT Molecular, a testing laboratory in Fort Collins, Colorado, for analysis.

City of Palm Springs Wastewater Treatment Plant SARS-CoV-2 Concentration - Number of Viral Copies per Liter of Wastewater

The average number of copies recorded at the City's wastewater treatment plant has decreased slightly. As shown in the chart above, the trendline continues to be flat.

Regarding Highly Transmissible Variants of Concern:

The lab is testing for the omicron variant B.1.1.529 in circulation and the BA.2 subvariant. In the sample taken on April 4, 2022, the signature mutations for the omicron variant were found in 100% of the detected covid virus. Of that, 79.9% had the signature markers for the BA.2 subvariant.

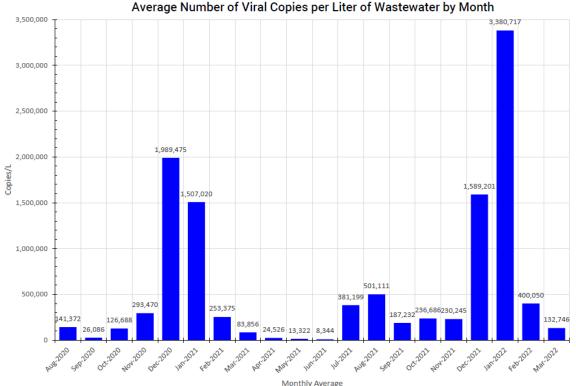

In the sample taken on April 5, 2022, the signature mutations for the omicron variant was found in 100% of the detected covid virus. There was a detection rate of 86.9% for the BA.2 subvariant in that test.

Tracking BA.2 subvariant

% Omicron	% BA.2
100%	36.5%
100%	36.7%
93.6%	8.8%
100%	33.4%
70%	45.6%
100%	46.5%
96.7%	64.6%
100%	73.2%
100%	79.9%
100%	86.9%
	100% 100% 93.6% 100% 70% 100% 96.7% 100%

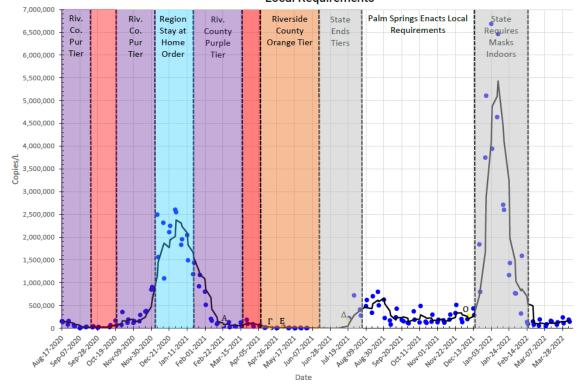

Monthly Averages: Here are the monthly averages since we started testing in August 2020
