

Palm Springs Wastewater Treatment Plant COVID-19 Testing Test Results from July 11 & 12, 2022

Palm Springs is one of many agencies voluntarily sampling its wastewater for the detection of SARS-CoV-2. To do the test, the City takes 24-hour composite samples from the wastewater treatment plant and sends them via dry ice to GT Molecular, a testing laboratory in Fort Collins, Colorado, for analysis.

**City of Palm Springs Wastewater Treatment Plant
SARS-CoV-2 Concentration - Number of Viral Copies per Liter of Wastewater
Last 90 Days**

The average number of copies/L recorded at the City’s wastewater treatment plant has decreased. The average of 1,433,093 copies/L from the previous week’s average has gone down to an average of 937,841 copies/L for July 11 & 12, 2022.

Regarding Highly Transmissible Variants of Concern: Tracking Omicron subvariants

The lab is now testing for the Omicron subvariants, the BA.4 & BA.5. It does this by identifying associated signature mutations in the genes that encode the spike protein of the virus.

While the BA.2.12.1 subvariant continues to be present in the wastewater samples collected at the Palm Springs Wastewater Treatment Plant, the Omicron BA.5 subvariant appears to be the dominant subvariant circulating in the community.

Date	%BA.2.12.1	% BA.4	%BA.5
6/12/22	52.4%		
6/14/22	43.8%		
6/20/22	26.3%		
6/21/22	29.7%		
6/27/22	29.8%	7.5%	61.3%
6/28/22	25.2%	12%	65.5%
7/4/22	5.7%	7.0%	76.4%
7/5/22	16.3%	5.9%	78.5%
7/11/22	11.4%	10.6%	75.7%
7/12/22	9.1%	9.3%	76.6%

Monthly Averages: Here are the monthly averages since we started testing in August 2020

Full Data: Here is a historical look at the data we've collected throughout the pandemic.
